## Nothing's more important than your well woman exam

## Be well advised

An annual mammogram and Pap test can detect cancer early when it's easier to treat.

- Women ages 40 to 44 have the choice to start annual breast cancer screening with mammograms.
- Women age 45 to 54 should get mammograms every year.
- Women age 55 and older should switch to mammograms every two years, or choose to continue yearly screening.
- Women age 21 to 29 should have a Pap test every three years.
- Women age 30 to 65 should have a Pap test and an HPV test every five years.

Discuss any risk factors with your physician and determine the most appropriate screening schedule for you.
